HAVHØST
Maritime nyttehaver i Holbæk Fjord

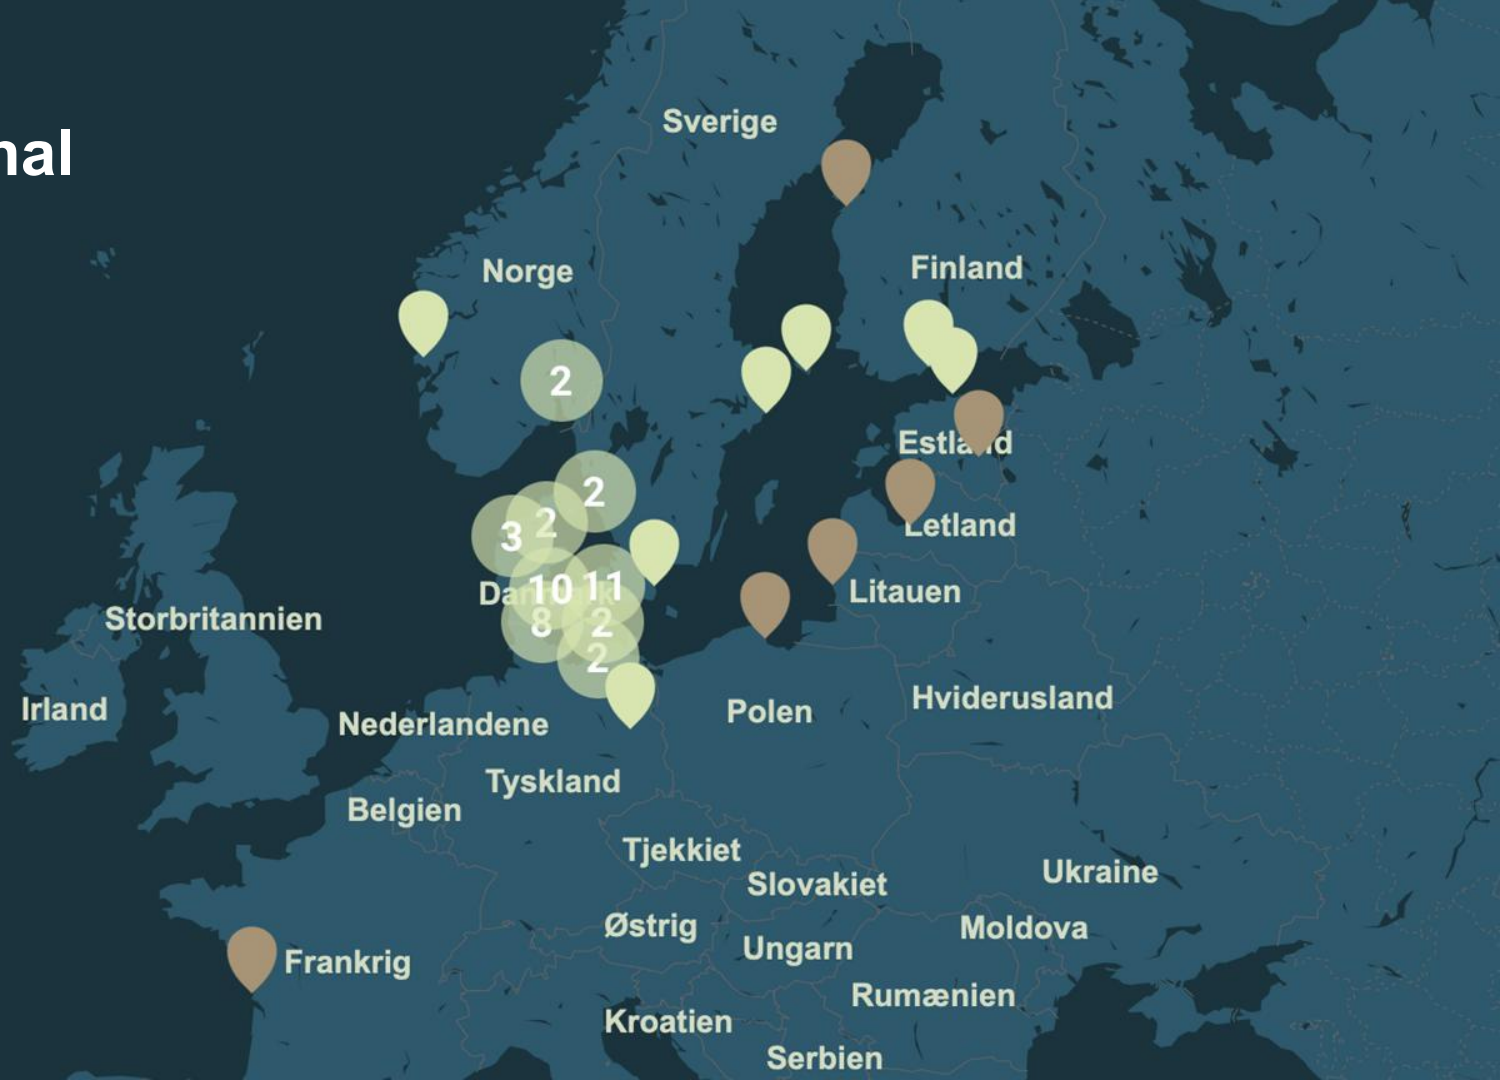

REGENERATIVT HAVBRUG
Maritime nyttehaver

Fra 2025-2028 afprøver Holbæk Kommune et projekt med regenerativt havbrug. Regenerativt havbrug i maritime nyttehaver er lidt som en "grøn køkkenhave" under vand, der både giver mad og forbedrer miljøet. De maritime nyttehaver bliver anlagt ud fra en flydende platform i Holbæk Havn.

Manifesto of regenerative ocean farming

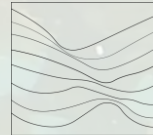

We cultivate on
the ecosystems'
own terms

The 8 principles of regenerative ocean farming:

1. We produce **food**
2. We cultivate on the **ecosystems'** own terms
3. We do **multi trophic** cultivation
4. We counteract **climate** change
5. We create robust **business** models
6. We take active part in our **communities**
7. We **scale out** rather than scale up
8. We rely on **knowledge**
